

1- PROJECT OVERVIEW:

Construction of a corn processing plant for the production of gritz and corn flour in Zambezi Province

2- OBJECTIVES:

- a) Fostering the organic corn crop to Small Emerging Commercial Farmers (PACEs in Portuguese) and Small Farmers (PA in Portuguese);
- b) Build a Corn Processing Plant for the production of Gritz and corn flour including the storage system in silos;

3- VISION:

Agro-Field intends to develop a project for the Promotion, and Processing of corn in the provinces of Zambézia and Nampula, the Processing unit to be installed in the district of Mocuba. The Project presupposes a funding scheme that will improve the incomes of current Small Emerging Commercial Farmers (PACEs in Portuguese) and Small Farmers (PA in Portuguese). Direct involvement of 60 Small Emerging Commercial Farmers (PACEs in Portuguese) and 7395 Small Farmers (PAs in Portuguese) indirectly is expected. The promotion model will involve the distribution of seeds, pesticides and technical assistance. The factory will have a capacity to process 12000 tons of corn per year, and the silos conservation system will have the capacity to store 12000 tons, 4 silos with a storage capacity of 3000 tons for each silo will be built next to the factory, which will guarantee the total availability of the raw material for the factory.
